Contents for Volume 146

Number 1, 7 September 1990

FORD, R. and FORD, E. D., Structure and Basic Equations of a Simulator for Branch Growth in the *Pinaceae* 1

FORD, E. D., AVERY, A. and FORD, R., Simulation of Branch Growth in the *Pinaceae*: Interactions of Morphology, Phenology, Foliage Productivity, and the Requirement for Structural Support, on the Export of Carbon 15

BRANDTS, W. A. M. and TRAINOR, L. E. H., A Non-linear Field Model of Pattern Formation: Intercalation in Morphalactic Regulation . . 37

BRANDTS, W. A. M. and TRAINOR, L. E. H., A Non-linear Field Model of Pattern Formation: Application to Intracellular Pattern Reversal in *Tetrahymena* 57

MIRONOV, S. L., Theoretical Analysis of Ca Wave Propagation along the Surface of Intracellular Stores 87

BURLANDO, B., The Fractal Dimension of Taxonomic Systems 99

SVETINA, S. and ŽEKŠ, B., The Mechanical Behaviour of Cell Membranes as a Possible Physical Origin of Cell Polarity 115

BROOKER, L. C., BROOKER, M. G. and BROOKER, A. M. H., An Alternative Population/Genetics Model for the Evolution of Egg Mimesis and Egg Crypsis in Cuckoos 123

Number 2, 21 September 1990

TOHÁ, J. C., SOTO, M. A. and CHINGA, H., Pattern Recognition of the Secondary Structure of Proteins (α-helix and β-structure) . . . 145

SMITH, D. A., The Theory of Sliding Filament Models for Muscle Contraction. II. Biochemically-based Models of the Contraction Cycle . . . 157

CHAPLAIN, M. A. J. and SLEEMAN, B. D., An Application of Membrane Theory to Tip Morphogenesis in *Acetabularia* 177

YING, D.-J. and HO, G.-T., Mathematical Representation with Graphic Reconstruction on a Microcomputer for an Arterial Tree 201

MURASE, M., Simulation of Ciliary Beating by an Excitable Dynein Model: Oscillations, Quiescence and Mechano-sensitivity 209

ISHIDA, K., Usefulness of Information in Bistable System and Dyson Model for the Origin of Metabolism 233

ELPHICK, C., MERON, E., RINZEL, J. and SPIEGEL, E. A., Impulse Patterning and Relaxational Propagation in Excitable Media 249

FRANCE, J., THORNLEY, J. H. M., LOPEZ, S., SIDDONS, R. C., DHANOA, M. S., VAN SOEST, P. J. and GILL, M., On the Two-compartment Model for Estimating the Rate and Extent of Feed Degradation in the Rumen 269

Number 3, 7 October 1990

MINI REVIEW

DANI, J. A. and LEVITT, D. G., Diffusion and Kinetic Approaches to Describe Permeation in Ionic Channels 289

FREEMAN, R. A. and WILSON, J. D., A Two-channel Hypothesis for Regulation of Cell Division and Differentiation 303

MANGEL, M., Dynamic Information in Uncertain and Changing Worlds 317

BOETTCHER, B., Transcription Initiation and Nuclease-sensitive Sites Upstream of the ε-Globin Gene in K562 Cells are Related to Poly (dA) . Poly (dT) Sequences 333

SUDA, H., Molecular Friction in an Actomyosin Molecular Machine . 341

MOREL, J. E., Velocity-induced Modifications in the Crossbridge and/or the Actin Filament Behavior during Shortening of Muscle Fibers . . 347

LI, Y.-X. and GOLDBETER, A., Frequency Encoding of Pulsatile Signals of cAMP based on Receptor Desensitization in *Dictyostelium* Cells . 355

VAZ NUNES, M., The Effect of Temperature on Photoperiodic Induction of Diapause in Insects and Mites: a Model for the Photoperiodic "Counter" 369

FINDLAY, S. and ROWE, G., Computer Experiments on the Evolution of Sex: the Haplopid Case 379

SCHURR, T. and GROVER, N. B., Analysis of a Model for Minichromosome Segregation in *Escherichia coli* 395

LEWIS, T. J. and GUEVARA, M. R., Chaotic Dynamics in an Ionic Model of the Propagated Cardiac Action Potential 407

Number 4, 21 October 1990

SMITH, D. A., The Theory of Sliding Filament Models for Muscle Contraction. III. Dynamics of the Five-state Model 433

VAN DER HOEVEN, N. and HEMERIK, L., Superparasitism as an ESS: to Reject or not to Reject, that is the Question 467

WEISBUCH, G., DE BOER, R. J. and PERELSON, A. S., Localized Memories in Idiotypic Networks 483

ABEDON, S. T., Selection for Lysis Inhibition in Bacteriophage 501

BEAUCHAMP, G. and KACELNIK, A., On the Fitness Functions Relating Parental Care to Reproductive Value 513

WONG, A. J., Development of a Spin-glass Model of Prebiotic Evolution: Environmental Effects on Ensembles of Genetic Polymers 523

GRIFFITH, T. M. and EDWARDS, D. H., Basal EDRF Activity Helps to keep the Geometrical Configuration of Arterial Bifurcations Close to the Murray Optimum 545

Index to Volume 146

ABEDON, S. T., Selection for lysis inhibition in bacteriophage, 501
Acetabularia, application of membrane theory to tip morphogenesis in, 177
Actin filament behavior during shortening of muscle fibers, velocity-induced modifications in, 347
Action potential, cardiac, propagated, chaotic dynamics in an ionic model of, 407
Actomyosin molecular machine, molecular friction in, 341
Arterial bifurcations: basal EDRF activity helps to keep the geometrical configuration close to the Murray optimum, 545
Arterial tree, mathematical representation with graphic reconstruction on a microcomputer for, 201
AVERY, A. (see FORD, E. D.), 15

Bacteriophage, selection for lysis inhibition in, 501
BEAUCHAMP, G. and KACELNIK, A., On the fitness functions relating parental care to reproduction value, 513
Bifurcations, arterial; basal EDRF activity helps to keep the geometrical configuration close to the Murray optimum, 545
Biochemically-based models of the muscle contraction cycle, 157
BOETTCHER, B., Transcription intiation and nuclease-sensitive sites upstream of the ε-globin gene in K562 cells are related to poly(dA) . poly(dT) sequences, 333
Branch growth in the *Pinaceae*, simulation of; interactions of morphology, phenology, foliage productivity, and the requirement for structural support, on the export of carbon, 15
Branch growth in the *Pinaceae*, structure and basic equations of a simulator for, 1
BRANDTS, W. A. M. and TRAINOR, L. E. H., A non-linear field model of pattern formation: application to intracellular pattern reversal in *Tetrahymena*, 57
BRANDTS, W. A. M. and TRAINOR, L. E. H., A non-linear field model of pattern formation: intercalation in morphalactic regulation, 37
BROOKER, A. M. H. (see BROOKER, L. C.), 123
BROOKER, L. C., BROOKER, M. G. and BROOKER, A. M. H., An alternative population/genetics model for the evolution of egg mimesis and egg crypsis in cuckoos, 123
BROOKER, M. G. (see BROOKER, L. C.), 123
BURLANDO, B., The fractal dimensions of taxonomic systems, 99

Ca wave propagation along the surface of intracellular stores, theoretical analysis of, 87
Carbon export; simulation of branch growth in the *Pinaceae*, 15
Cardiac action potential, propagated, chaotic dynamics in an ionic model of, 407
Cells, *Dictyostelium*, frequency encoding of pulsatile signals of cAMP based on receptor desensitization in, 355
Cell division and differentiation, a two-channel hypothesis for regulation of, 303
Cells, K562; transcription initiation and nuclease-sensitive sites upstream of the ε-globin gene are related to poly(dA) . poly(dT) sequences, 333
Cell membranes; mechanical behaviour as a possible physical origin of cell polarity, 115
Chaotic dynamics in an ionic model of the propagated cardiac action potential, 407
CHAPLAIN, M. A. J. and SLEEMAN, B. D., An application of membrane theory to tip morphogenesis in *Acetabularia*, 177
CHINGA, H. (see TOHÁ, J. C.), 146
Ciliary beating: simulation by an excitable dynein model; oscillations, quiescence and mechanosensitivity, 209
Computer experiments on the evolution of sex: the haplopid case, 379

Cuckoos, an alternative population/genetics model for the evolution of egg mimesis and egg crypsis in, 123

DANI, J. A. and LEVITT, D. G., Diffusion and kinetic approaches to describe permeation in ionic channels, 289
DE BOER, R. J. (see WEISCUCH, G.), 483
DHANOA, M. S. (see FRANCE, J.), 269
Diapause in insects and mites, the effect of temperature on photoperiodic induction of; a model for the photoperiodic "counter", 369
Dictypstelium cells, frequency encoding of pulsatile signals of cAMP based on receptor desensitization in, 355
Diffusion and kinetic approaches to describe permeation in ionic channels, 289
Dynamics, chaotic, in an ionic model of the propagated cardiac action potential, 407
Dynamic information in uncertain and changing worlds, 317
Dynamics of the five-state sliding filament model for muscle contraction, 433
Dynein model, simulation of ciliary beating by; oscillations, quiescence and mechanosensitivity, 209
Dyson model for the origin of metabolism, usefulness of information in bistable system and, 233

EDRF basal activity helps to keep the geometrical configuration of arterial bifurcations close to the Murray optimum, 545
EDWARDS, D. H. (see GRIFFITH, T. M.), 545
Egg mimesis and egg crypsis in cuckoos, an alternative population/genetics model for the evolution of, 123
ELPHICK, C., MERON, E., RINZEL, J. and SPIEGEL, E. A., Impulse patterning and relaxational propagation in excitable media, 249
Escherichia coli, a model for minichromosome segregation in, 395
Environmental effects on ensembles of genetic polymers; development of a spin-glass model of prebiotic evolution, 523
Evolution of egg mimesis and egg cryptis in cuckoos, an alternative population/genetics model for, 123
Evolution, prebiotic, spin-glass model for; environmental effects on ensembles of genetic polymers, 523
Evolution of sex, computer experiments; the haplopid case, 379
Excitable media, impulse patterning and relaxational propagation in, 249

Feed degradation in the rumen, on the two-compartment model for estimating the rate and extent of, 269
FINDLAY, S. & ROWE, G., Computer experiments on the evolution of sex: the haplopid case, 379
Fitness functions relating parental care to reproductive value, 513
Foliage productivity; simulation of branch growth in the *Pinaceae*, 15
FORD, E. D., AVERY, A. and FORD, R., Simulation of branch growth in the *Pinaceae*: interactions of morphology, phenology, foliage productivity, and the requirement for structural support, on the export of carbon, 15
FORD, E. D. (see FORD, R.), 1
FORD, R. and FORD, E. D., Structure and basic equations of a simulator for branch growth in the *Pinaceae*, 1
FORD, R. (see FORD, E. D.), 15
Fractal dimension of texonomic systems, 99
FRANCE, J., THORNLEY, J. H. M., LOPEZ, S., SIDDONS, R. C., DHANOA, M. S., VAN SOEST, P. J. and GILL, M., On the two-compartment model for estimating the rate and extent of feed degradation in the rumen, 269

FREEMAN, R. A. and WILSON, J. D., A two-channel hypothesis for regulation of cell division and differentiation, 303
Frequency encoding of pulsatile signals of cAMP based on receptor desensitization in *Dictyostelium* cells, 355
Friction, molecular, in an actomyosin molecular machine, 341

Gene, ε-globin, in K562 cells, transcription initiation and nuclease-sensitive sites upstream of, are related to poly(dA) . poly(dT) sequences, 333
Genetic polymers, environmental effects on ensembles of; development of a spin-glass model of prebiotic evolution, 523
Genetics/population model, alternative, for the evolution of egg mimesis and egg crypsis in cuckoos, 123
GILL, M. (see FRANCE, J.), 269
GOLDBETER, A. (see LI, Y.-X.), 355
GRIFFITH, T. M. and EDWARDS, D. H., Basal EDRF activity helps to keep the geometrical configuration of arterial bifurcation close to the Murray optimum, 545
GROVER, N. B. (see SCHURR, T.), 395
Growth, branch, in the *Pinaceae*, simulation of; interactions of morphology, phenology, foliage productivity, and the requirement for structural support, on the export of carbon, 15
Growth, branch, in the *Pinaceae*, structure and basic equations of a simulator for, 1
GUEVARA, M. R. (see LEWIS, T. J.), 407

Haplopid case; computer experiments on the evolution of sex, 379
HEMERIK, L. (see VAN DER HOEVEN, N.), 467
HO, G.-T. (see YING, D.-J.), 201

Idiotypic networks, localized memories in, 481
Impulse patterning and relaxational propagation in excitable media, 249
Information, dynamic, in uncertain and changing worlds, 317
Information, usefulness of, in bistable system and Dyson model for the origin of metabolism, 233
Insects, the effect of temperature on photoperiodic induction of diapause in; a model for the photoperiodic "counter", 369
Interaction in morphalactic regulation; a non-linear field model of pattern formation, 37
Intracellular pattern reversal in *Tetrahymena*; application of non-linear field model of pattern formation, 57
Intracellular stores, theoretical analysis of Ca wave propagation along the surface of, 87
Ionic channels, diffusion and kinetic approaches to describe permeation in, 289
Ionic model of the propagated cardia action potential, chaotic dynamics in, 407
ISHIDA, K., Usefulness of information in bistable system and Dyson model for the origin of metabolism, 233

K562 cells: transcription initiation and nuclease-sensitive sites upstream of the ε-globin gene are related to poly(dA) . poly(dT) sequences, 333
KACELNIK, A. (see BEAUCHAMP, G.), 513

LEVITT, D. G. (see DANI, J. A.), 289

LI, Y.-X. and GOLDBETER, A., Frequency encoding of pulsatile signals of cAMP based on receptor desensitization in *Dictyostelium* cells, 355
LOPEZ, S. (see FRANCE, J.), 269
Lysis inhibition, selection for, in bacteriophage, 501

MANGEL, M., Dynamic information in uncertain and changing worlds, 317
Membranes, cell; mechanical behaviour as a possible physical origin of cell polarity, 115
Membrane theory applied to tip morphogenesis in *Acetabularia*, 177
Memories, localized, in idiotypic networks, 483
MERON, E. (see ELPHICK, C.), 249
Metabolism, usefulness of information in bistable system and Dyson model for the origin of, 233
Minichromosome segregation in *Escherichia coli*, model for, 395
MIRONOV, S. L., Theoretical analysis of Ca wave propagation along the surface of intracellular stores, 87
Mites, the effect of temperature on photoperiodic induction of diapause in; a model for the photoperiodic "counter", 369
Molecular friction in an actomyosin molecular machine, 341
MOREL, J. E., Velocity-induced modifications in the crossbridge and/or the actin filament behavior during shortening of muscle fibres, 347
Morphalactic regulation, intercalation in; a non-linear field model of pattern formation, 37
Morphogenesis, tip, in *Acetabularia*, application of membrane theory to, 177
Morphology; simulation of branch growth in the *Pinaceae*, 15
MURASE, M., Simulation of ciliary beating by an excitable dynein model: oscillations, quiescence and mechanosensitivity, 209
Muscle contraction, theory of sliding filament models for; biochemically-based models of the contraction cycle, 157
Muscle contraction, theory of sliding filament models for; dynamics of the five-state model, 433
Muscle fibers, velocity-induced modifications in the crossbridge and/or the actin filament behaviour during shortening of, 347

Networks, idiotypic, localized memories in, 483

Parental care, relation to reproductive value; fitness functions, 513
Pattern formation, a non-linear field model; application to intracellular pattern reversal in *Tetrahymena*, 57
Pattern formation, a non-linear field model; intercalation in morphalactic regulation, 37
Pattern recognition of proteins (α-helix and β-structure), 146
Patterning, impulse, and relaxational propagation in excitable media, 249
PERELSON, A. S. (see WEISBUCH, G.), 483
Permeation in ionic channels; description by diffusion and kinetic approaches, 289
Phenology; simulation of branch growth in the *Pinaceae*, 15
Photoperiodic induction of diapause in insects and mites, the effect of temperature on; a model for the photoperiodic "counter", 369
Pinaceae, simulation of branch growth in; interactions of morphology, phenology, foliage productivity, and the requirements for structural support, on the export of carbon, 15
Pinaceae, structure and basic equations of a simulator for branch growth in, 1
Polarity, cell; mechanical behaviour of cell membranes as a possible physical origin, 115
Poly(dA) . poly(dT) sequences, transcription initiation and nuclease-sensitive sites upstream of the ε-globin gene in K562 cells are related to, 333
Population/genetics model, alternative, for the evolution of egg mimesis and egg crypsis in cuckoos, 123
Propagated cardiac action potential, chaotic dynamics in an ionic model of, 407
Propagation, relaxational, in excitable media, 249
Proteins (α-helix and β-structure), pattern recognition of, 146
Pulsatile signals of cAMP, frequency encoding of, based on receptor desensitization in *Dictyostelium* cells, 355

Recognition, pattern, of proteins (α-helix and β-structure), 146
Regulation of cell division and differentiation; a two-channel hypothesis, 303
Regulation, morphalactic, intercalation in; a non-linear field model of pattern formation, 37
Relaxational propagation in excitable media, 249
Reproductive value, the fitness functions relating parental care to, 513
RINZEL, J. (see ELPHICK, C.), 249
ROWE, G. (see FINDLAY, S.), 379
Rumen, on the two-compartment model for estimating the rate and extent of feed degradation in, 269

SCHURR, T. and GROVER, N. B., Analysis of a model for minichromosome segregation in *Escherichia coli*, 395
Selection for lysis inhibition in bacteriophage, 501
Sex, computer experiments on the evolution of; the haplopid case, 379
SIDDONS, R. C. (see FRANCE, J.), 269
SLEEMAN, B. D. (see CHAPLAIN, M. A. J.), 177
Sliding filament models for muscle contraction; biochemically-based models of the contraction cycle, 157
Sliding filament models for muscle contraction; dynamics of the five-state model, 433
SMITH, D. A., The theory of sliding filament models for muscle contraction. II. Biochemically-based models of the contraction cycle, 157
